

Figure 3.2c — Peptide/Hydrolysate Subgraph: Computable Evidence Gap
This class is represented by only 2 corpus papers with no in vivo evaluation.
Zero confirmed mechanistic edges — gap confirmed by three independent evidence streams.

No peptide/hydrolysate edges connected
to methane yield in the corpus

methane
yield

Zero database results (gap search)
Single corpus entry (n=2 papers)
Zero confirmed mechanistic edges
No in vivo evaluation (2015–2026)

This figure confirms the peptide/hydrolysate class as a computable research gap. The absence of edges is a scientific finding, not a pipeline failure.
